

ST-7000 Series Single Channel High-Definition Modulator

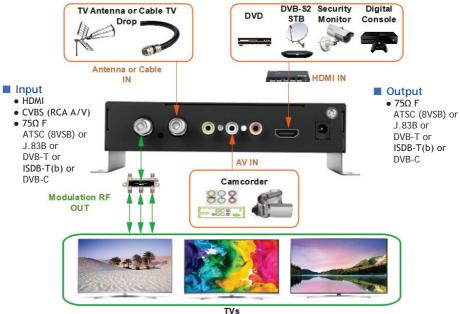

Start Guide

v1.3 April, 2021

support@starlink7.com

Introduction

Multiple Video Input with Single Modulation Output

IVS

ST-7000 Single Channel High-Definition (HD) modulator provides single channel delivery of multiple video/audio digital/analog sources over signal coaxial cable. HD video output resolution can be up to 1080p @ 30 fps with adjustable output power level from 70 to 100 dB μ V in 1 dB step.

Output frequency ranges from 50 MHz to 860 MHz in 6 MHz, 7 MHz or 8 MHz channel bandwidth depending on the modulation technique.

The operation of ST-7000 is intuitive by using on-panel keypad and 2.4" color LCD screen.

Overview

Operation Panel

- 2.4" color LCD
- Keypad

Return or escape to upper level menu and confirm the current operation

Arrow keys to traverse

between fields or

increase / decrease

selected field value

Power is up

No HDMI input

Confirm the selection

HDMI input detected

• LEDs

٠	PWR	solid	red

- HD solid red solid amber
- CVBS solid amber

Installation Requirement

- Available video/audio source from Cable TV, antenna and HDMI device
- Available TV set
- Available electrical power socket

TV Standards

Cable TV (USA)

J.83B

- Over-the-Air TV (USA) ATSC (8VSB), ATSC3
- Cable TV (EU, SA) DVB-C (J.83A/C) • Over-the-Air TV (CO) DVB-T
- Over-the-Air (SA) ISDB-T(b)

Peripheral Interface

Front Panel

- RF-OUT Modulated RF output, 75Ω F
- ANT-IN Antenna or Cable RF Input, 75Ω F
- HD IN HDMI Input, HDMI
- RCA IN CVBS AV Input
- DC 12V IN Power Input
- GND Grounding

Back Panel

- 1000Base-T Gigabit Ethernet, RJ-45
- Mini USB USB for software upgrade from PC

Package Content

- ST-7000 modulator
- Mini USB-male / A-male cable
- Coaxial cable (RG6)
- HDMI Cable
- AC/DC power adapter
- Start Guide

Video Quality

Video quality is optimized by determining the size and the speed to transmit MPEG packets to the TV. The packet latency and delay variation are adjusted automatically by the Modulator to reach the best video quality and performance on the TV.

Audio Codec

Audio encoding is automatically selected by the Modulator to reach the best quality according to local modulation technique.

AC3 2.1 Dolby Digital Audio coding applies to ATSC (8VSB) broadcasting in North America.

MPEG MPEG-2 Layer 1 audio coding applies to DVB-T broadcasting in Europe and South America.

ACC Advanced Audio Coding for MPEG-4 applies to ISDB-T broadcasting in South America and certain ATSC (8VSB) broadcasting in North America.

Before Installation

Combining (Cable) TV Signals from Service Provider (e.g. Comcast)

- In order to combine the existing TV broadcasting channels from service provider, it's necessary to select an output frequency and output channel (ATSC only) for Modulator's HDMI video. The channel information of your local over-the-air broadcasting or local Cable TV service can normally be found online or from the channel listing table provided by your service provider.
- For business installers, a handheld spectrum analyzer up to 1 GHz can be helpful to make the installation easier and faster although it's not mandatory.
- If the modulator output is going to feed a Digital Cable Converter box or a set-top box, some service providers offer a dedicated channel (and frequency) for modulated video and some service providers may need a specific PID to be configured by the Modulator for MPEG streams to be recognized by the set-top box. Refer to the section of <u>MPEG Transport Stream Parameters</u> for PID setup.
- If the output power level of the Modulator is too high, it may oversaturate the TV signals delivered by service providers. It' necessary to lower the output power level or use an attenuator to reduce the oversaturation.

Choose Modulated Output Frequency for HDMI Video on TV

- Modulated output frequency of HDMI video can be any existing channel frequency available from your local <u>Channel Plan</u>.
- Depending on the modulation technique of over-the-air broadcasting TV or Cable TV used in your area, refer to the corresponding appendix for <u>Channel Plan</u> information.
- Select an unused or an unimportant channel from the <u>Channel Plan</u> as output frequency of HDMI video.
- If you are unsure about which output frequency to be used for HDMI video
 - \diamond Pick a frequency between channel gap, make sure it's 6 MHz or 8 MHz away from the previous and the next channels.
 - ◊ Use the recommended frequency indicated on the corresponding Channel Plan appendix.
- \diamond Use the default frequency selected by the Modulator.
- Modulated output frequency and channel number can be configured from the LCD menu or Web Configuration page.
- Follow the instructions of this Start Guide to set up output frequency and channel number to watch HDMI video on your TV.
- Your TV needs to learn the HDMI video channel by auto or manual channel rescan. Refer to the user's guide of your TV set to practice the rescan for channel detection of HDMI video.

ATSC - Over-the-Air TV with HDMI Modulation

If TV signal is originally coming from an outdoor or an indoor antenna, follow the steps below to combine the HDMI video with over-the-air TV video.

The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> Modulated Output Frequency for HDMI video on TV to pick up the output

<u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- (2) Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- ④ Connect the **RF OUT** port of the Modulator to the **RF/Antenna IN** port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc. It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.
- (6) Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and System Setup → Modulator Type → select ATSC-Air Modulation → Channel Plan → select from the existing channel plan for HDMI video frequency or Modulation → Frequency → press OK to edit frequency in MHz with

Modulation \rightarrow Channel No. \rightarrow press OK to edit channel number with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

Modulation \to Subchannel No. \to press OK to edit subchannel number with $\blacktriangleleft \blacktriangleright \blacktriangle$ keys

Modulation \rightarrow Program Name \rightarrow press OK to edit channel name with soft alphanumerical keypad

- ⑦ Turn on the TV. Refer to the user's manaul of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel number entered in step 6. Default channel is channel 66.
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

Once the HDMI video source is detected and modulated, the HD LED on panel glows solid amber.

SAT

$ATSC \leftarrow Cable TV$ with HDMI Modulation

If TV signal is originally coming from a Cable TV coaxial drop, follow the steps below to combine the HDMI video with Cable TV video.

The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> <u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- ② Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- (4) Connect the RF OUT port of the Modulator to the RF/Antenna IN port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc. It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.
- (6) Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and System Setup → Modulator Type → select ATSC-Cable DVB Settings → Constellation → select 64QAM or 256QAM Modulation → Channel Plan → select from the existing channel plan for HDMI video frequency or Modulation → Frequency → press OK to edit frequency in MHz with <> A ▼ keys Modulation → Channel No. → press OK to edit channel number with <> A ▼ keys

Modulation \to Subchannel No. \to press OK to edit subchannel number with $\blacktriangleleft \blacktriangleright \blacktriangle$ keys

 ${\rm Modulation} \to {\rm Program}$ Name $\to {\rm press}~{\rm OK}$ to edit channel name with soft alphanumerical keypad

- ⑦ Turn on the TV. Refer to the user's manual of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel number entered in step 6. Default channel is channel 66.
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

$DVB-T \leftarrow Over-the-Air TV$ with HDMI Modulation

If TV signal is originally coming from an indoor or an outdoor antenna, follow the steps below to combine the HDMI video with DVB-T TV video. The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> <u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- (2) Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- (4) Connect the RF OUT port of the Modulator to the RF/Antenna IN port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc. It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.
- (6) Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and System Setup → Modulator Type → select DVB-T DVB Settings → Carrier Type → select 8K DVB Settings → Constellation → select 64QAM Modulation → Country → select your country if it's available Modulation → Channel Plan → select from the existing channel plan for HDMI video frequency or Modulation = Country → Select Plan = Country → Select from the existing channel plan for HDMI video frequency or Modulation = Country → Select Plan = Country → Select from the existing channel plan for HDMI video frequency or Modulation = Country → Select Plan = Country → Select from the existing channel plan for HDMI video frequency or Modulation = Country → Select Plan = Select Pl

Modulation \rightarrow Frequency \rightarrow press OK to edit frequency in MHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.

(6) Go through the LCD menu screen on the Modulator to configure settings.

Press OK to go to the main menu and

System Setup \rightarrow Modulator Type \rightarrow select DVB-C

DVB Settings \rightarrow Symbol Rate \rightarrow press OK to edit symbol rate in kHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

- DVB Settings \rightarrow Constellation \rightarrow select 128QAM or 256QAM
- Modulation \rightarrow Country \rightarrow select your country if it's available

Modulation \rightarrow Channel Plan \rightarrow select from the existing channel plan for HDMI video frequency or

Modulation \rightarrow Frequency \rightarrow press OK to edit frequency in MHz with $\blacktriangleleft \triangleright \blacktriangle$ keys

Modulation $\xrightarrow{}$ Program Name $\xrightarrow{}$ press OK to edit channel name with soft alphanumerical keypad

- (7) Turn on the TV. Refer to the user's manual of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel plan number selected in step 6.
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

MPEG Transport Stream Parameters

It's not recommended to change MPEG Transport Stream (TS) parameters unless you understand the MPEG PID structure well or your Service Provider requires you to configure specific Packet Identifier (PID) describing the payload data for set-top box initialization.

Refer to Wikipedia for more information about MPEG Transport Stream structure. https://en.wikipedia.org/wiki/MPEG_transport_stream https://en.wikipedia.org/wiki/Program-specific information

♦ NID	Network ID contained in Network Information Table (NIT).
ONID	Organization Network ID contained in Network Information Table (NIT).
♦ TSID	Transport Stream ID contained in Service Description Table (SDT).
♦ SID	Service ID contained in Service Description Table (SDT) to identify transport stream.
◆ PMT PID	Program Map Table (PMT) PID contains the directory listing of all program map tables in the transport stream, including the program number and the list of elementary streams.
Video PID	Video content stream PID contained in MPEG transport stream for
	demultiplexer to locate by sorting the incoming packets.
Audio PID	Audio content stream PID contained in MPEG transport stream for
	demultiplexer to locate by sorting the incoming packets.
 Service Provider 	Name of the broadcaster responsible for the service availability or authority
	contained in Service Description Table (SDT).
Network Name	Name of the network contained in Network Information Table (NIT).

Installing Multiple Modulators

In case multiple units of ST-7000 series modulators are installed on the same coax network/wiring or connected to the same TV set, pay attention to following items to avoid conflicts or interference among modulators.

- Set up and connect the modulator to coax network or TV set one modulator at a time.
- Make sure the following settings for HDMI video modulation are different among modulators

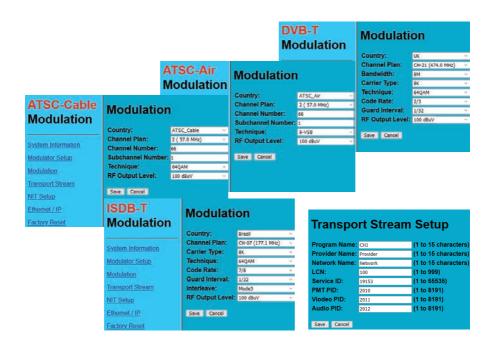

```
    Output frequency
    refer to the section <u>Choose Modulated Output Frequency for HDMI</u>
<u>Video on TV</u> to pick up different output frequencies for different
modulators
    Channel name
    Channel name
    SLK HD1, the channel naming
can be SLK HDn, where n indicates the modulator count.
```

(3) Channel number and subchannel number (available on ATSC modulator only)

- A combiner or multiplexer is needed to combine the output signals of multiple modulators if the coax network and the TV sets share the source of video output of modulators.
- If ST-7000 modulator is used together with other brands' modulators, harmony settings of RF output (power) level and output frequency must be found. Refer to the section <u>Combining Service</u> <u>Provider Signals</u> for more information.
- Make a note on each modulator with RF output level and output frequency for quick reference and easy trouble shooting whenever needed.
- If more than more than 40 TV sets are connected to share the modulator output signal, it might be necessary to use active splitter or combiner to amplify the output power to reach individual TV at the far end. The receiving power of each TV should be higher than 75 dB μ V or the signal can be instable.
- Depending on the quality and aged damage, splitters, combiners and coaxial cable itself can introduce high attenuation or insertion loss to the coax wiring. Power loss budget calculation might be necessary along the delivery path.

Web Configuration / Remote Control

- Connect the Ethernet (RJ-45) port on the back panel of the Modulator and the Ethernet port of a PC with an Ethernet cable. Power on the Modulator.
- (2) Configure the IP address of the PC to be 192.168.1.100.
- (3) Launch a Web browser on PC and type http://192.168.1.15, The default IP address of the Modulator is 192.168.1.15. The current IP address of the Modulator can be found from LCD menu command System Setup \rightarrow IP Address.
- (4) On the Web management pages of the Modulator, all configuration settings from LCD menu are available for remote access through Web interface.

Notes

Warrantv

This device has two-year Limited Hardware Warranty and 90-day free software updates after may also have other rights which vary from State to State in the United States, from province to province in Canada, and from country to country elsewhere in the world. To the extent that this Limited Warranty Statement shall be deemed modified to be consistent with such local law. Under the state of the state of the state of the world. such local law, certain disclaimers and limitations of this Warranty Statement may not apply to the customer.

Important Safety Instructions

Basic safety precautions should always be followed to reduce the risk of fire, electrical shock, and personal injury, including the following:

- Do not use this product near water for example, near a bathtub, kitchen sink, laundry tub, or swimming pool, or in a wet basement; only clean with dry cloth.
- Do not block any ventilation openings. Install in accordance with the manufacturer's instructions. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus including amplifiers that produce heat.
- Do not remove the cover of the modulator, cover the modulator with thick or heavy objects.
- Use only the power cord indicated in this manual if applicable.

Coaxial Cable

If applicable, the coaxial cable screen shield needs to be connected to the Earth at the building entrance per ANSI/NFPA70, the National Electrical Code (NEC), in particular Section 820.93, "Grounding of Outer Conductive Shield of a Coaxial Cable," or in accordance with local regulation.

FCC Class B Equipment

This device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try and correct the interference by implementing one or more of the following measures:

Reorient or relocate the device

- Increase the separation between the device and receiver
- Connect the device to an outlet on a circuit different from that to which the receiver is connected (applicable only to power line products)
- Consult the dealer or an experience radio or television technician for help

Declaration of Conformity for Products Marked with the FCC logo - USA Only

This device complies with Part 15 of the FCC Rules license-exempt RSS standard(s). Operation is subject to the following two conditions:

This device may not cause harmful interference

This device must accept any interference received, including interference that may cause undesired operation of the device

Where applicable, the Most Technology Service Co., Ltd. performed above specification conformity test and issued certificate # MOSTCT20071786 in accordance with local regulation.

Declaration of CE Conformity for EU

Manufacturer: SatLink Electronics Co., Ltd. No. 26, Zishan Road, Jiangnan High-Tech Park, Licheng District

Quarzhou, Fujian Province, China Objects: ST-7000, ST-7632 This declaration of conformity is issued under the sole responsibility of the manufacturer for products of HDMI RF modulators that support single channel or multi-channel DVB-T, ISDB-T, DVB-C (J.83B/A/C), and ATSC standards. The object(s) of the declaration described above are in conformity with the relevant Community harmonization legislation:

Low Voltage Directive (2014/35/EU)

Electromagnetic Compatibility Directive (2014/30/EU) Radio Equipment Directive (2014/53/EU)

And their amendments

References to the relevant harmonised standards, including the date of the standard, used in

References to the relevant harmonised standards, including the date of the standard, used in relation to which the conformity is declared: - ETSI EN 301 48901 v2.2.3: 2019-11 - ESTI EN 301 489-53 v1.1.1: 2019-04 - ESTI EN 303 372-2 v1.1.1: 2016-04 - ESTI EN 303 340 v1.2.0: 2020-06 - EN IEC 62368-1:2020+A11:2020 Where applicable, the Most Technology Service Co., Ltd. performed above specification conformity test and issued certificate # MOSTCC21061592 in accordance with local regulation.

Trouble Shooting

- The video and the audio from HDMI source are not synchronized on TV Unplug and plug the HDMI port on the Modulator to restore.
- ♦ My HDMI video cannot be viewed on TV but other channels can be viewed
 - If SATLINK logo screen can be viewed on TV without HDMI source device connected, check the user's guide of your HDMI device to ensure fixed and high resolution to output video signal for modulation correctly.
 - If nothing is displayed on TV with or without HDMI source device connected, check all connections, settings are correct according to the instructions on this Start Guide.
 - Try another TV, if available, without HDMI source device connected to ensure SATLINK logo screen is displayed.
 - If a HDMI switch or a hub is used, some of them don't pass through Extended Display Identification Data (EDID) to tell the video resolution. Connect the HDMI deivce directly to the Modulator or TV without a switch.
 - If the HDMI source is from a PC/DVI device (e.g. laptop computer), the Modulator doesn't support it. A converter box to convert the DVI video to standard 3D video in 720p or 1080p is required.
- The HD LED doesn't stay solid amber all the time Make sure the HDMI source device is set to output fixed resolution at 1080p or 720p and connected directly to the Modulator without intermediate components like splitters, combiners or switch.
- Video with fast motion doesn't play well or shows ghosting on TV <u>Problem</u>: This might be caused by interlacing issue with 1080i resolution on sports or action video.
- + How to get the best video quality on TV with the Modulator
 - Change the HDMI video output format to 1080p or 720p (progressive) mode. If TV set doesn't support 1080p, change the HDMI video output format to 720p and enable interlacing.
 - \bullet If QAM modulation technique is available from the Modulator, change it to 256QAM.
- How do I know my TV supports ATSC (8VSB) or J.83B standard Most recent models of TV set sold in the US within the last three years can support both ATSC (8VSB) and J.83B standards but if you are not sure, the broadcasting standard of the TV can be realized by checking the wiring:
 - If the coaxial cable connected to the TV is an outdoor/indoor antenna drop, the TV supports ATSC (8VSB).
 - If the coaxial cable connected to the TV is a Cable TV drop (e.g. from Comcast), the TV supports $\rm J.83B.$
- Some or most channels are instable or cannot be viewed on TV The input signal can be too strong for the TV. Reduce the RF output (power) level to lower value, but higher than 70dBuV, from the menu screen on the Modulator.
- ♦ Audio from HDMI source is skipping or stuttering on TV If HDMI source device has Compressed Audio or Dolby Digital Sound enabled, try to set it to traditional Pulse-Code Modulation (PCM) Stereo or Uncompressed Audio output. Double compression of audio signal may cause audio skipping on TV.
- How do I replace an old modulator with ST-7000 Refer to the settings of the old modulator and duplicate them, such us Output Frequency, Output Power Level, Channel Number, Channel Name ... etc. to ST-7000 as much as possible before replacing the old modulator.

The HDMI video stretches or shrinks on TV ST-7000 processes HDMI video without alteration in color and aspect ratio. Check the settings of aspect ratio on HDMI device and TV to adjust and fix.
