

Single Channel High-Definition Modulator DVB-T/ISDB-T and J.83A/C DVB-C QAM

Start Guide

v1.2 April, 2021

support@starlink7.com

Introduction

Multiple Video Input with Single Modulation Output

ST-7632 Single Channel High-Definition (HD) modulator provides single channel delivery of multiple video/audio digital/analog sources over signal coaxial cable. HD video output resolution can be up to 1080p @ 30 fps with adjustable output power level from 70 to 100 dB μ V in 1 dB step.

Output frequency ranges from 50 MHz to 860 MHz in 6 MHz, 7 MHz or 8 MHz channel bandwidth depending on the modulation technique.

The operation of ST-7632 is intuitive by using on-panel keypad and 2.4" color LCD screen.

Overview

Operation Panel

- 2.4" color LCD
- Keypad

Return or escape to upper level menu and confirm the current operation

Arrow keys to traverse

between fields or increase / decrease

selected field value

Confirm the selection

OK

• LEDs

• PWR	solid red	Power is up
• HD	solid red	No HDMI input
	solid amber	HDMI input detected
 CVBS 	solid amber	AV input detected

Installation Requirement

- · Available video/audio source from Cable TV, antenna and HDMI device
- Available TV set
- · Available electrical power socket

TV Standards

· Cable TV (USA)

J.83B

- Over-the-Air TV (USA) ATSC (8VSB), ATSC3
- · Cable TV (EU, SA) DVB-C (J.83A/C)
- Over-the-Air TV (CO) DVB-T ISDB-T(b)
- Over-the-Air (SA)

Peripheral Interface

Front Panel

- RF-OUT Modulated RF output, 75Ω F
- ANT-IN Antenna or Cable RF Input, 75Ω F
- HD IN HDMI Input, HDMI
- HD OUT HDMI Loop Out, HDMI
- RCA IN
- **CVBS AV Input** • DC 12V IN Power Input
- GND Grounding
- Back Panel
- MicroUSB
- USB for software upgrade from PC

Package Content

- ST-7632 modulator
- Mini USB-male / A-male cable
- Coaxial cable (RG6)
- HDMI Cable
- AC/DC power adapter
- Start Guide

LCD Configuration Menu

Quick Install(ation)

- press $\triangleleft \triangleright$ to show the country list, $\blacktriangle \lor$ to select country. Depending on the Country Modulation mode selected, channel table of selected country will be loaded for Channel Name and Frequency setup. If channel table is unavailable for your country, select the nearby country. press OK to edit HDMI output frequency, ◄► to move cursor and ▲▼ to Frequency change frequency in range, press **RETURN** to save and escape. RF Attenuation press $\triangleleft \triangleright$ to change RF attenuation between 0 and 30 dBµV. Bandwidth press **◄** ► to change modulation channel bandwidth. Signal Source press < to select HDMI (digital) or CVBS (optional composite analog) signal source. ♦ I CN press OK to edit LCN, $\triangleleft \triangleright$ to move cursor and $\land \lor$ to change LCN, press **RETURN** to save and escape. press **◄** to select channel name/number. Channel Name Program Name press OK to edit program name with alphanumerical soft keypad, press **RETURN** to save and escape. (ISDB-T Only) Remote Key ID press $\blacktriangleleft \triangleright \blacktriangle \lor$ to change the ID number of TV program sorting. Area Code press $\blacktriangleleft \triangleright \blacktriangle \lor$ to change the area code. DVB Settings DVB-T (or ISDB-T or DVB-C Mode) press $\triangleleft \triangleright$ to change modulation technique. Symbol Rate press OK to edit symbol rate in MHz, ◀► to move cursor and ▲▼ to change symbol rate. Code Rate press **I** to change code rate. Carrier Type press **I** to change carrier type. Guard Interval press **◄** to change guard band interval.
- Interleaving press **◄** to change interleaving

Transport Stream (TS) Settings

- NID Network ID between 1 and 65535.
- Organization Network ID between 1 and 65535. ONID
- TSID Transport Stream ID between 1 and 65535.
- SID Service Stream ID between 1 and 65535.
- PMT PID Program Map Table (PMT) Packet ID (PID) between 1 and 8191.
- Video PID Video Packet ID (PID) between 1 and 8191.
- Audio PID Audio Packet ID (PID) between 1 and 8191.

press OK to edit IDs, $\triangleleft \triangleright$ to move cursor and $\triangleleft \lor$ to change values, press **RETURN** to save and escape.

- press OK to edit service provider name with alphanumerical soft keypad, Service Provider press RETURN to save and escape.
- Network Name press **OK** to edit network name with alphanumerical soft keypad, press **RETURN** to save and escape.
- System Setup
- OSD Language press $\triangleleft \triangleright$ to change on-screen-display language.
- Modulator Mode press **◄** ► to change modulator type.
- Key Tone press ◀► to turn ON/OFF keypad beep sound.
- Factory Reset press OK to reset and restore factory defaults.
- About Display information of software and hardware revisions of the unit.

Modulation Attributes

Video Quality

Video quality is optimized by determining the size and the speed to transmit MPEG packets to the TV. The packet latency and delay variation are adjusted automatically by the Modulator to reach the best video quality and performance on the TV.

Audio Codec

Audio encoding is automatically selected by the Modulator to reach the best quality according to local modulation technique.

MPEG MPEG-2 Layer 1 audio coding applies to DVB-T broadcasting in Europe and South America.

ACC Advanced Audio Coding for MPEG-4 applies to ISDB-T broadcasting in South America and certain ATSC (8VSB) broadcasting in North America.

Before Installation

Combining (Cable) TV Signals from Service Provider

- In order to combine the existing TV broadcasting channels from service provider, it's necessary to select an output frequency for Modulator's HDMI video. The channel information of your local over-the-air broadcasting or local Cable TV service can normally be found online or from the channel listing table provided by your service provider.
- For business installers, a handheld spectrum analyzer up to 1 GHz can be helpful to make the installation easier and faster although it's not mandatory.
- If the Modulator output is going to feed a Digital Cable Converter box or a set-top box, some service providers offer a dedicated channel (and frequency) for modulated video and some service providers may need a specific PID to be configured by the Modulator for MPEG streams to be recognized by the set-top box. Refer to the section of <u>MPEG Transport Stream Parameters</u> for PID setup.
- If the output power level of the Modulator is too high, it may oversaturate the TV signals delivered by service providers. It' necessary to lower the output power level or use an attenuator to reduce the oversaturation.

Choose Modulated Output Frequency for HDMI Video on TV

- Modulated output frequency of HDMI video can be any existing channel frequency available from your local <u>Channel Plan</u>.
- Depending on the modulation technique of over-the-air broadcasting TV or Cable TV used in your area, refer to the corresponding appendix for <u>Channel Plan</u> information.
- Select an unused or an unimportant channel from the <u>Channel Plan</u> as output frequency of HDMI video.
- If you are unsure about which output frequency to be used for HDMI video
 - \diamond Pick a frequency between channel gap, make sure it's 6 MHz or 8 MHz away from the previous and the next channels.
 - ◊ Use the recommended frequency indicated on the corresponding Channel Plan appendix.
- \diamond Use the default frequency selected by the Modulator.
- Modulated output frequency and channel number can be configured from the LCD menu or Web Configuration page.
- Follow the instructions of this Start Guide to set up output frequency and channel number to watch HDMI video on your TV.
- Your TV needs to learn the HDMI video channel by auto or manual channel rescan. Refer to the user's guide of your TV set to practice the rescan for channel detection of HDMI video.

$DVB-T \leftarrow Over-the-Air TV$ with HDMI Modulation

If TV signal is originally coming from an indoor or an outdoor antenna, follow the steps below to combine the HDMI video with DVB-T TV video. The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> <u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- (2) Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- (4) Connect the RF OUT port of the Modulator to the RF/Antenna IN port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc. It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.
- (6) Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and System Setup → Modulator Type → select DVB-T DVB Settings → Carrier Type → select 9K
 - DVB Settings \rightarrow Carrier Type \rightarrow select 8K
 - DVB Settings \rightarrow Constellation \rightarrow select QAM-64
 - Quick Install \rightarrow Country \rightarrow select your country if it's available

Quick Install \rightarrow Channel Name \rightarrow press $\blacktriangleleft \triangleright$ to select channel name/ number from the drop down list of channel table

Quick Install \rightarrow Frequency \rightarrow press OK to edit frequency in MHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

Quick Install \rightarrow Bandwidth \rightarrow select 8MHz channel bandwidth if unsure

Quick Install \rightarrow Signal Source \rightarrow press $\blacktriangleleft \triangleright$ to select source of input Quick Install \rightarrow Program Name \rightarrow press OK to edit channel name with

- soft alphanumerical keypad
- ⑦ Turn on the TV. Refer to the user's manual of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel plan number selected in step 6.
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

Once the HDMI video source is detected and modulated, the HD LED on panel glows solid amber.

ISDB-T(b) \leftarrow Over-the-Air TV with HDMI Modulation

If TV signal is originally coming from an indoor or an outdoor antenna, follow the steps below to combine the HDMI video with ISDB-T(b) video. The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> <u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- (2) Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- (4) Connect the RF OUT port of the Modulator to the RF/Antenna IN port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc. It's recommended to set the video output of HDMI device with fixed

resolution at 1080p or 720p.

6 Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and

System Setup \rightarrow Modulator Type \rightarrow select ISDB-T

- DVB Settings \rightarrow Carrier Type \rightarrow select 8K
- DVB Settings \rightarrow Constellation \rightarrow select QAM-64
- Quick Install \rightarrow Country \rightarrow select your country if it's available

Quick Install \rightarrow Channel Name \rightarrow press $\blacktriangleleft \triangleright$ to select channel name/ number from the drop down list of channel table

Quick Install \rightarrow Frequency \rightarrow press OK to edit frequency in MHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

Quick Install \rightarrow Signal Source \rightarrow press $\blacktriangleleft \triangleright$ to select source of input

Quick Install \rightarrow Program Name \rightarrow press OK to edit channel name with soft alphanumerical keypad

Quick Install \to Remote Key ID \to press OK to edit remote key ID with $\blacktriangleleft \blacktriangleright \And$ keys

Quick Install \rightarrow Area Code \rightarrow press OK to edit are code with $\blacktriangleleft \triangleright \blacktriangle$ keys

- ⑦ Turn on the TV. Refer to the user's manual of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel plan number selected in step 6
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

Once the HDMI video source is detected and modulated, the HD LED on panel glows solid amber.

$DVB-C \leftarrow Cable TV$ with HDMI Modulation

If TV signal is originally coming from a Cable TV coaxial drop, follow the steps below to combine the HDMI video with DVB-C Cable TV video. The Modulator with default settings can work as a plug-and-play device if it's unsure about how to setup the output frequency of HDMI video. If you plan to customize the settings, refer to the section <u>Choose</u> <u>Modulated Output Frequency for HDMI Video on TV</u> to pick up the output frequency and channel number of HDMI video.

The on-screen-display language can be changed by going to Syatem Setup \rightarrow OSD Language.

- ① Power on the Modulator with power adapter included in the package.
- (2) Disconnect the end of coaxial cable connected to the RF/Antenna IN port of the TV.
- (3) Connect the end of the coaxial cable removed from step 2 to the ANT IN port of the Modulator.
- (4) Connect the RF OUT port of the Modulator to the RF/Antenna IN port of the TV with a coaxial cable included in the package.
- (5) Connect the HD IN port of the Modulator to the HDMI OUT port of video players or input devices like DVD player, Satellite TV Set-Top Box, Video Stream, Security Monitor ... etc.

It's recommended to set the video output of HDMI device with fixed resolution at 1080p or 720p.

6 Go through the LCD menu screen on the Modulator to configure settings. Press OK to go to the main menu and

System Setup \rightarrow Modulator Type \rightarrow select DVB-C

DVB Settings \rightarrow Symbol Rate \rightarrow press OK to edit symbol rate in kHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

DVB Settings \rightarrow Constellation \rightarrow select QAM-64, QAM-128 or QAM-256 Quick Install \rightarrow Country \rightarrow select your country if it's available

Quick Install \rightarrow Channel Name \rightarrow press $\triangleleft \triangleright$ to select channel name/ number from the drop down list of channel table

Quick Install \rightarrow Frequency \rightarrow press OK to edit frequency in MHz with $\blacktriangleleft \triangleright \blacktriangle \forall$ keys

Quick Install \rightarrow Signal Source \rightarrow press $\blacktriangleleft \triangleright$ to select source of input Quick Install \rightarrow Program Name \rightarrow press OK to edit channel name with soft alphanumerical keypad

- (7) Turn on the TV. Refer to the user's manual of the TV and run Auto Scan for channel detection.
- (8) Change the TV channel to the channel plan number selected in step 6.
- (9) HDMI video is displayed on the TV if HDMI video source is inserted. Otherwise, the SATLINK logo is displayed.

Once the HDMI video source is detected and modulated, the HD LED on panel glows solid amber.

MPEG Transport Stream Parameters

It's not recommended to change MPEG Transport Stream (TS) parameters unless you understand the MPEG PID structure well or your Service Provider requires you to configure specific Packet Identifier (PID) describing the payload data for set-top box initialization.

Refer to Wikipedia for more information about MPEG Transport Stream structure. https://en.wikipedia.org/wiki/MPEG_transport_stream https://en.wikipedia.org/wiki/Program-specific information

♦ NID	Network ID contained in Network Information Table (NIT).
ONID	Organization Network ID contained in Network Information Table (NIT).
♦ TSID	Transport Stream ID contained in Service Description Table (SDT).
♦ SID	Service ID contained in Service Description Table (SDT) to identify transport stream.
PMT PID	Program Map Table (PMT) PID contains the directory listing of all program
	map tables in the transport stream, including the program number and the
	list of elementary streams.
 Video PID 	Video content stream PID contained in MPEG transport stream for
	demultiplexer to locate by sorting the incoming packets.
Audio PID	Audio content stream PID contained in MPEG transport stream for
	demultiplexer to locate by sorting the incoming packets.
 Service Provider 	Name of the broadcaster responsible for the service availability or authority
	contained in Service Description Table (SDT).
Network Name	Name of the network contained in Network Information Table (NIT).

Installing Multiple Modulators

In case multiple units of ST-7632 modulators are installed on the same coax network/wiring or connected to the same TV set, pay attention to following items to avoid conflicts or interference among modulators.

- Set up and connect the modulator to coax network or TV set one modulator at a time.
- Make sure the following settings for HDMI video modulation are different among modulators

```
    Output frequency
    refer to the section <u>Choose Modulated Output Frequency for HDMI</u>
<u>Video on TV</u> to pick up different output frequencies for different
modulators
    Channel name
    SLK HD1, the channel naming
can be SLK HDn, where n indicates the modulator count.
```

(3) Channel number and subchannel number (available on ATSC modulator only)

- A combiner or multiplexer is needed to combine the output signals of multiple modulators if the coax network and the TV sets share the source of video output of modulators.
- If ST-7632 modulator is used together with other brands' modulators, harmony settings of RF output (power) level and output frequency must be found. Refer to the section <u>Combining Service</u> <u>Provider Signals</u> for more information.
- Make a note on each modulator with RF output level and output frequency for quick reference and easy trouble shooting whenever needed.
- If more than more than 40 TV sets are connected to share the modulator output signal, it might be necessary to use active splitter or combiner to amplify the output power to reach individual TV at the far end. The receiving power of each TV should be higher than 75 dB μ V or the signal can be instable.
- Depending on the quality and aged damage, splitters, combiners and coaxial cable itself can introduce high attenuation or insertion loss to the coax wiring. Power loss budget calculation might be necessary along the delivery path.

Specifications Note: Specifications are subject to change without notice.

Modulation					
Dutput Frequency 50 to 860 MHz, 1 kHz Step			itep		
Output Level		70 to 100 dBmV, 1 dB Step			
Encoding		H.264 MPEG-4/AVC; 1 to 20 Mb/s compression bitrate			
Interface		HDMI x 2, 75Ω F x 2, RCA AV x 1			
	CVBS (Optional)				
	Resolution	576i PAL	480i NTSC		
		HDM	Ì		
	Resolution MPEG-4 CVBS (PAL, NTSC)	Input	Output		
		1920 x 1080_60p	1920 x 1080_30p		
Video		1920 x 1080_50p	1920 x 1080_25p		
		1920 x 1080_60i	1920 x 1080_30i		
		1920 x 1080_50i	1920 x 1080_25i		
		1280 x 720_60p	1280 x 720_30p		
		1280 x 720_50p	1280 x 720_25p		
	Aspect Ratio	16:9; 4:3			
	Encoding	MPEG-2 AAC			
Audio	Sampling Rate	48 kHz			
	Bit Rate	64, 96, 128, 192, 256, 320 kbps			
General					
Power Supply		12 VDC, 1.5A			
Dimensions with Rack		8" x 5.35" x 2" (204 x 136 x 51 mm)			
Weight		1 lb (0.45 kg)			
Temperature		0 to 50 °C (Operation)			
		-20 to 80 °C (Storage)			

SATLINK logo screen on TV

Note: In order to display video normally on TV

- Signal accepted by the TV must comply with standard MPEG-4 encoding
- The video content is not protected under High-Bandwidth Digital Content Protection (HDCP) agreement

DVB-T Channel Plan - Europe, Colombia & Asia

Channel Bandwidth: 7 MHz or 8 MHz QAM, QPSK

 Suggested settings for HDMI video Frequency 474.000 MHz (CH-21) Channel Name SLK HD1

Channel Plan is for reference only. It may vary across countries, areas or cities. Refer to the LCD menu screen of the Modulator to load country-wise Channel Plan if available.

- UK DVB-T channels start from CH-21.
- New Zealand DVB-T channels start from CH-26.
- Australia DVB-T channels 7 MHz bandwidth.

Notes

Warranty

This device has two-year Limited Hardware Warranty and 90-day free software updates after purchase. This Limited Warranty Statement gives the customer specific legal rights. The customer may also have other rights which vary from country to country in the world. To the extent that this Limited Warranty Statement shall be deemed modified to be consistent with such local law. Under such local law, certain disclaimers and limitations of this Warranty Statement may not apply to the customer.

Important Safety Instructions

Basic safety precautions should always be followed to reduce the risk of fire, electrical shock, and personal injury, including the following:

- Do not use this product near water for example, near a bathtub, kitchen sink, laundry tub, or swimming pool, or in a wet basement; only clean with dry cloth.
- Do not block any ventilation openings. Install in accordance with the manufacturer's instructions. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus including amplifiers that produce heat.
- Do not remove the cover of the modulator, cover the modulator with thick or heavy objects.
- Use only the power cord indicated in this manual if applicable.

Coaxial Cable

Objects:

If applicable, the coaxial cable screen shield needs to be connected to the Earth at the building entrance per ANSI/NFPA70, the National Electrical Code (NEC), in particular Section 820.93, "Grounding of Outer Conductive Shield of a Coaxial Cable," or in accordance with local regulation.

Declaration of CE Conformity for EU

Manufacturer: SatLink Electronics Co., Ltd.

No. 26, Zishan Road, Jiangnan High-Tech Park, Licheng District Quanzhou, Fujian Province, China ST-7000. ST-7632

This declaration of conformity is issued under the sole responsibility of the manufacturer for products of HDMI RF modulators that support single channel or multi-channel DVB-T, ISDB-T, DVB-C (J.83B/A/C), and ATSC standards. The object(s) of the declaration described above are in conformity with the relevant Community harmonization legislation:

- Low Voltage Directive (2014/35/EU)

- Electromagnetic Compatibility Directive (2014/30/EU)
- Radio Equipment Directive (2014/53/EU)

And their amendments.

References to the relevant harmonised standards, including the date of the standard, used in relation to which the conformity is declared:

- ETSI EN 301 48901 v2.2.3: 2019-11
- ESTI EN 301 489-53 v1.1.1: 2019-04
- ESTI EN 303 372-2 v1.1.1: 2016-04
- ESTI EN 303 340 v1.2.0: 2020-06
- EN IEC 62368-1:2020+A11:2020

Where applicable, the Most Technology Service Co., Ltd. performed above specification conformity test and issued certificate # MOSTCC21061592 in accordance with local regulation.

Trouble Shooting

- The video and the audio from HDMI source are not synchronized on TV Unplug and plug the HDMI port on the Modulator to restore.
- My HDMI video cannot be viewed on TV but other channels can be viewed
 - If SATLINK logo screen can be viewed on TV without HDMI source device connected, check the user's guide of your HDMI device to ensure fixed and high resolution to output video signal for modulation correctly.
 - If nothing is displayed on TV with or without HDMI source device connected, check all connections, settings are correct according to the instructions on this Start Guide.
 - Try another TV, if available, without HDMI source device connected to ensure SATLINK logo screen is displayed.
 - If a HDMI switch or a hub is used, some of them don't pass through Extended Display Identification Data (EDID) to tell the video resolution. Connect the HDMI deivce directly to the Modulator or TV without a switch.
 - If the HDMI source is from a PC/DVI device (e.g. laptop computer), the Modulator doesn't support it. A converter box to convert the DVI video to standard 3D video in 720p or 1080p is required.
- The HD LED doesn't stay solid amber all the time Make sure the HDMI source device is set to output fixed resolution at 1080p or 720p and connected directly to the Modulator without intermediate components like splitters, combiners or switch.
- Video with fast motion doesn't play well or shows ghosting on TV <u>Problem</u>: This might be caused by interlacing issue with 1080i resolution on sports or action video.
- + How to get the best video quality on TV with the Modulator
 - Change the HDMI video output format to 1080p or 720p (progressive) mode. If TV set doesn't support 1080p, change the HDMI video output format to 720p and enable interlacing.
 - If QAM modulation technique is available from the Modulator, change it to 256QAM.
- How do I know my TV supports DVB-T or DVB-C (J.83A) standard Most recent models of TV set sold in Europe within the last three years can support both DVB-T and DVB-C(J.83A) standards but if you are not sure, the broadcasting standard of the TV can be realized by checking the wiring:
 - If the coaxial cable connected to the TV is an outdoor/indoor antenna drop, the TV supports DVB-T.
 - If the coaxial cable connected to the TV is a Cable TV drop from a service provider, the TV supports DVB-C.
- Some or most channels are instable or cannot be viewed on TV The input signal can be too strong for the TV. Reduce the RF output (power) level to lower value, but higher than 70dBuV, from the menu screen on the Modulator.
- ♦ Audio from HDMI source is skipping or stuttering on TV If HDMI source device has Compressed Audio or Dolby Digital Sound enabled, try to set it to traditional Pulse-Code Modulation (PCM) Stereo or Uncompressed Audio output. Double compression of audio signal may cause audio skipping on TV.
- How do I replace an old modulator with ST-7632 Refer to the settings of the old modulator and duplicate them, such us Output Frequency, Output Power Level, Channel Number, Channel Name ... etc. to ST-7632 as much as possible before replacing the old modulator.
- The HDMI video stretches or shrinks on TV ST-7632 processes HDMI video without alteration in color and aspect ratio. Check the settings of aspect ratio on HDMI device and TV to adjust and fix.
